Projects

Gradewise

[live](#) [github](#)

Gradewise is a AI powered Teacher Assistant, it is a platform for auto grading assignments, plagiarism report and personalized feedback to students about their strengths and weaknesses.

- Integrated Google AI Tools
- Used vector embeddings for plagiarism detection, used pinecone database for storing vector embeddings
- With help of Xenovo transformer converted assignments in vector embeddings
- Added a little bit of gamification (eg. leaderboard,badged) to keep students enaged and make it little interesting

Nextmatch

[live](#) [github](#)

Gradewise is a Platform for football teams to schedule matches and look for players or even other teams to match up against.

- Implemented a captain-to-captain match request flow where captains can send, accept, or reject match invites.
- Implemented Realtime notification on match request and accept using websockets
- Designed an efficient search engine for players using Prisma full-text search.
- Integrated Next Auth for user authentication
- Microservice Architecture

Archive

[live](#) [github](#)

Built a portfolio site for a architectural photographer agency

- Designed a portfolio site
- Implemented a headless cms with on-demand ISR
